(a) the Θ and Z steps
Relative gap to the L-BFGS minimum
Iteration of the alternating steps
never increases:
largest single-step
rise 3e-15
Analytical steps, λ = 0.5
Analytical steps, λ = 2
Analytical steps, λ = 8
(b) inference: conditional mean
Regression on 400000 samples
Closed form −Θij/Θii
equal
Simulation, 600 coefficients
max error 0.0053
